

LYON ITCC Center – Institute of Hematology and Pediatric Oncology (IHOPe)

The Pediatric Hematology-Oncology Hospital in Lyon is an expert referral center for the Auvergne-Rhône-Alpes region, labelled by the ITCC since its creation, and recognized by French authorities since 2015 for practicing pediatric early phase clinical trials.

Come and join a dynamic team of 4 dedicated physicians, 2 research nurses and 5 clinical research assistants. You will be able to participate in more than 40 active clinical trials including early phase clinical trials (phase 1 and 2) and manage more than 30 patients per year. Lyon is also national coordinator and/or sponsor for several trials so you will be able to gain insights into the entire trial development process.

Our hospital accommodates patients with solid tumor (including CNS tumors), hematological malignancies and can provide state-of-art care, including hematopoietic stem cell transplant, CAR T cells, and soon gene therapy. We treat children and AYAs (up-to 25 years-old) with cancer within our wards and we also take care of patients with benign tumors or hematological diseases.

Strengthen your experience with access to multiple regional and national multidisciplinary boards and 3 molecular tumor boards every week (one biological meeting where the pathogenicity of identified variants are discussed with biologists, for both adult and pediatric patients, and 2 clinical tumor boards, where the actionability of targets is discussed within expert panels for both pediatric and adult malignancies). Interact with our experts in clinical and pre-clinical research, with access to a wide variety of labs strongly involved in pediatric hemato-oncology research. The geographic proximity to the Lyon University will enable you to easily follow academic programs or other training opportunities.

Put a perspective on your clinical knowledge with our ethical and palliative staffs, where patients eligible for early phase trials are discussed. You will also be able to discuss regulations with our legal team and have access to our ethics committee.

If you want to see how things are done in an adult department, the Center Leon Berard, a leading center for early phase trials, is right next door and you will be able to attend staff and consultations for a wide variety of diseases and treatment.

An interesting learning and career-developing opportunity, in a beautiful city within less than 2 hours from both sea and mountains for your weekends and holidays!
